

The Black Diamond Deck Bush is used to stabilizing the center of the drill rod. Our Deck Bushes can be manufactured to individual requirements and specifications. Black Diamond Deck Bushes are manufactured to the highest standard for maximum durability.

Bearing Type Deck Bush:

Black Diamond Drilling Australia can produce and supply a wide variety of bearing type deck bushes for many rigs and applications. The bearing type deck bush has a fixed outer body that houses a rotating inner sleeve that holds the drill string. These rotating deck bushes are suited to higher speed drilling such as Rotary Drilling.

One Piece Deck Bush:

Black Diamond Drilling Australia also has a wide range of solid one piece deck bushes for many rigs and applications. The one piece deck bush has a solid body with replaceable sleeves that make contact with the drill string. These one piece deck bushes are suited to slower rotation drilling methods such as DTH drilling.
